Re: Promoting Investment in the 3550-3700 MHz Band, GN Docket No. 17-258

Night Owl Wireless, LLC operates a Fixed Wireless network ranging from Davenport, Iowa to Durant, Iowa encompassing over 100 square miles. We offer plans with speeds from 4/1Mb to 25/5Mb+

NOW has been deploying LTE 3650-3700Mhz gear to areas with the lack of reliable internet & even areas without an option of an internet company. We have been deploying this gear in expectation of the CBRS rules from 2015 to increase our current LTE coverage and speed offerings with UNLIMITED DATA that has no BS while the end users experience benefits from clean spectrum. Doing a rural build of Fiber is NOT economical so much that the government awarded funding to the local ILEC to put fiber to the node for rural DSL on 50+ year old copper lines that have been destroyed over the years and has been yielding POOR results!

NOW supports the Commission making more spectrum available for fixed wireless deployments, and maintaining reasonably sized geographic licenses in the 3.5 GHz band, as larger licenses would prohibit NOW, other WISPs, Power Companies, Municipalities and other State Government entities from investing in this band.

Please keep the 3-5 year terms with the smaller areas available so NOW and others can continue to grow or even have a chance to start in a market NOT controlled by the few.

Thank you for your time,  
Andrew Willey
